60% Group Coursework

2024-25 Autumn

Group Name:			
SN	Student Name	College ID	University ID
1	Dorje Syangba Lama	NP01NT4A240146	24046380
2	Mausam Bhattraï	NP01NT4S210153	20049169
3	Digi Shrestha	NP01NT4A240129	24046376
4	Poonam Maharjan	NP01NT4A240140	24046427
5	Krish Khadka	NP01NT4A220213	22015700

Assignment Due Date: Tuesday, December 31, 2024

Assignment Submission Date: Sunday, February 2, 2025

Word count: **1799**

I confirm that I understand my coursework needs to be submitted online via MySecondTeacher under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

1 Introduction:

1)HTML:

HTML stands for Hyper Text Markup Language. During 1989, Tim Berners-Lee invented the HTML which was regarded as a publishing language. This language helps us to create different websites and webpages, by which we have created this e-commerce website of ours. Usually, HTML is used by web developers to develop the structure of webpages using Markup language. (w3 schools, 2018)

Tags used here are:

- `<html>` This tag is used to define the HTML (starting tag).
- `<head>` This tag contains the information about the site.
- `<body>` This tag contains the page contents.
- `<title>` This tag is used for giving titles to the webpage.

The goal of the coursework is to build, develop and design an e-commerce website, focusing various types of watches. This coursework or project aims to focus on understanding the web development process, specializing on creating an e-commerce platform that brings the dynamic need of online shopping. The website will work as an online store, allowing user smooth interactions and providing ranges of watch collections to user.

2)Cascading Style Sheet (CSS):

CSS stands for Cascading Style Sheet. While HTML is used to create the structure of a webpage, CSS is used to style those pages to look more attractive. Therefore, we have also used CSS here in this website creation.

There are mainly three types of CSS that are used in this project they are:

- **Inline CSS:** This means that the style is done within the same line of code which we write to make the structure of a webpage.
- **Internal CSS:** When the styling CSS code is written in the start of the HTML structure inside a style tag then that is known as Internal CSS.

- External CSS: This is A styling method where a external file is created to write the code of CSS which is later linked to webpages by using link tag.

3)JavaScript (JS):

JavaScript is one of the fundamental and powerful language developed by Brendan Eich in 1995. HTML and CSS is used for structuring and designing the webpage whereas JavaScript is used to describe the behaviour of a webpage and here have used the JavaScript for insuring the form validation and for alert message popup.

E-commerce is the buying and selling of goods and services over the internet.

This coursework will use HTML5, CSS, and JavaScript to ensure that the website is interactive, functional, and user-friendly. Additionally, the website will also be responsive to user and provides a consistent expression across devices.

Aims and Objectives

- To create visually enchanting and user-friendly website, for displaying and selling watches.
- To understand and apply HTML, CSS and JavaScript effectively.
- Ensuring accessibility, responsive, functionality and interactive across all web pages by users.

Tools Used

- HTML for meta tags and structure.
- CSS for styling, including all external, internal and inline stylesheet.
- JavaScript for interactive, functionality and responsive website.
- Wireframe for providing clear view of each web pages, a blueprint of an entire website.

Verdict.

This report meets the project requirements, process, and introduction, Aim and objectives and tools used are concluded.

2 Discussion and Analysis:

We were given this coursework to create an e-commerce website for selling watches online and it was not a easy task we had to create the design first. We had to build our own website using our own knowledge. We had gone to many e-commerce websites like Rolex (Rolex, 2000), etc. These types of references and research help us to create this wonderful website. We used HTML, CSS and JS for creating the required website.

3 Development:

3.1 Home page:

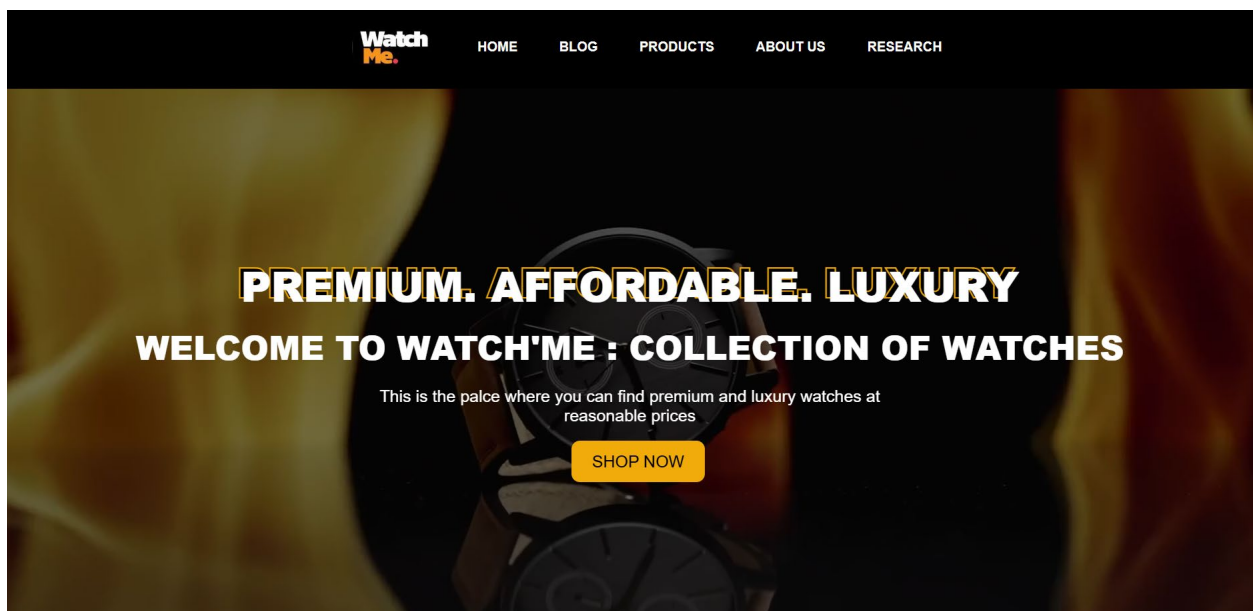

Figure 1: Home Page

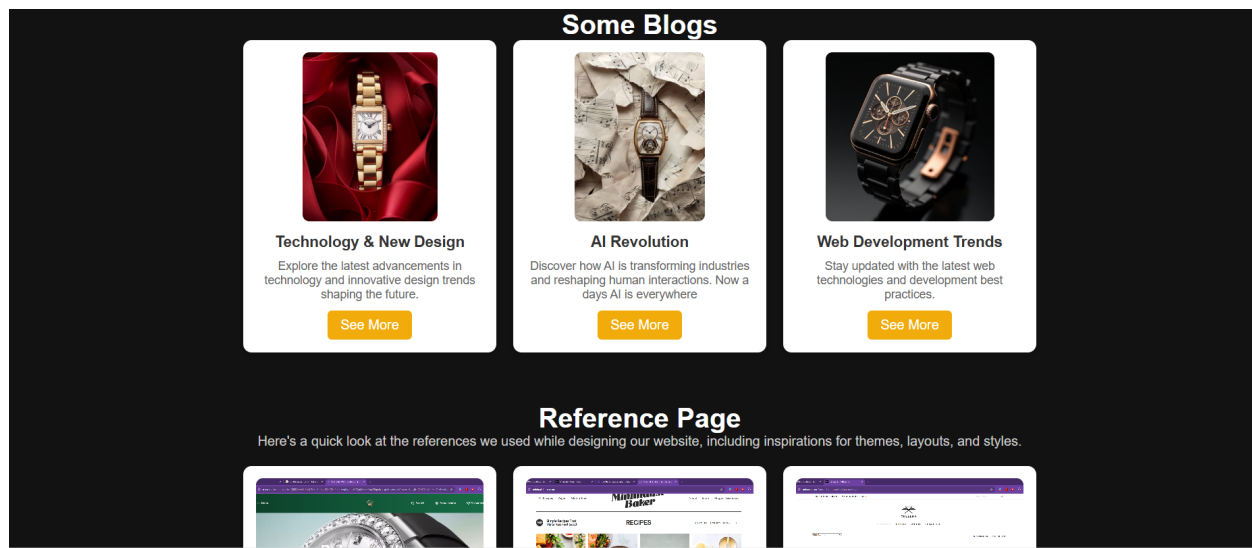

Figure 2: Home Page Outline Section

We have created a website named=" WatchMe.", where people can buy different watches from all over the world. For the structuring of this webpage, we have used tags like <head>, <title>,
, <div>, <table>, etc. In CSS we have used the basic concept of CSS as we used font, colour, background, etc functions for styling the page and also used internal, external and inline CSS while styling the home page.

3.2 Blog Page:

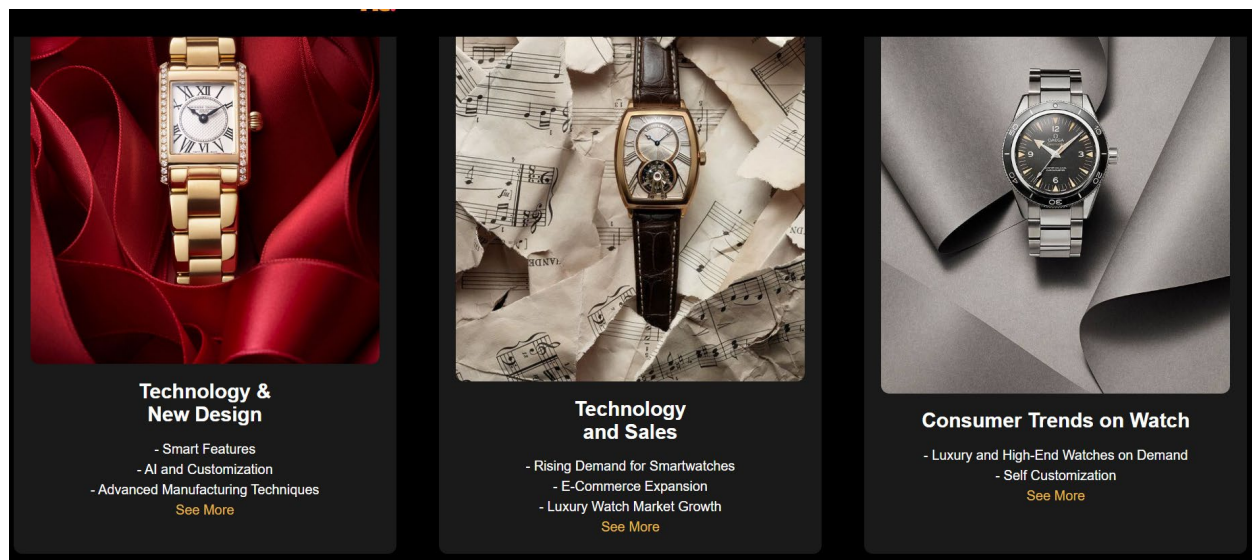

Figure 3 Blog page

In the blog page we have used similar HTML tags as home page. Additionally, we have used `<li>`, `<a>` tags to make to look cooler and catchy. One common external CSS is being used for styling nav bar and footer. In our blog page we have mentioned the history of watches, the evolution of watches with the development of AIs and other technical tools. There are impact, cause and benefits of the watches in our blog section

3.3 Product Page:

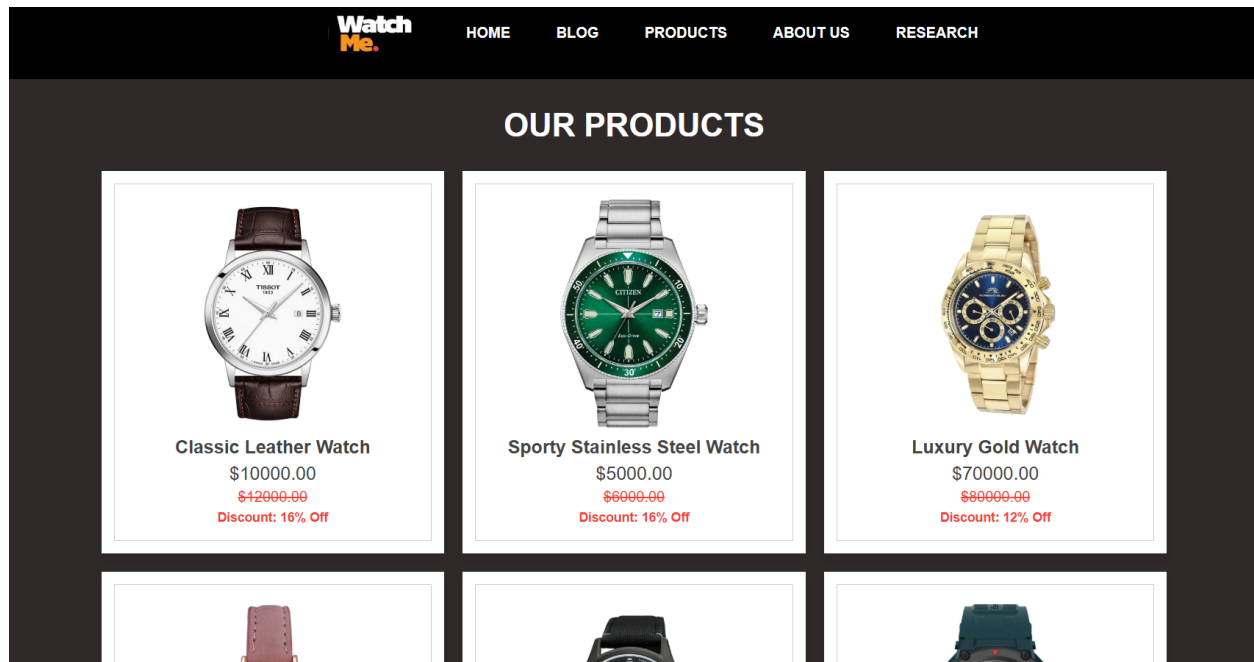

Figure 4 Product page

Here we have listed different varieties of products across the world by which the customers will get there needed watch. Same type of HTML and CSS is used here but now in this page we have used javascript for buy, add to chart and cancel button.

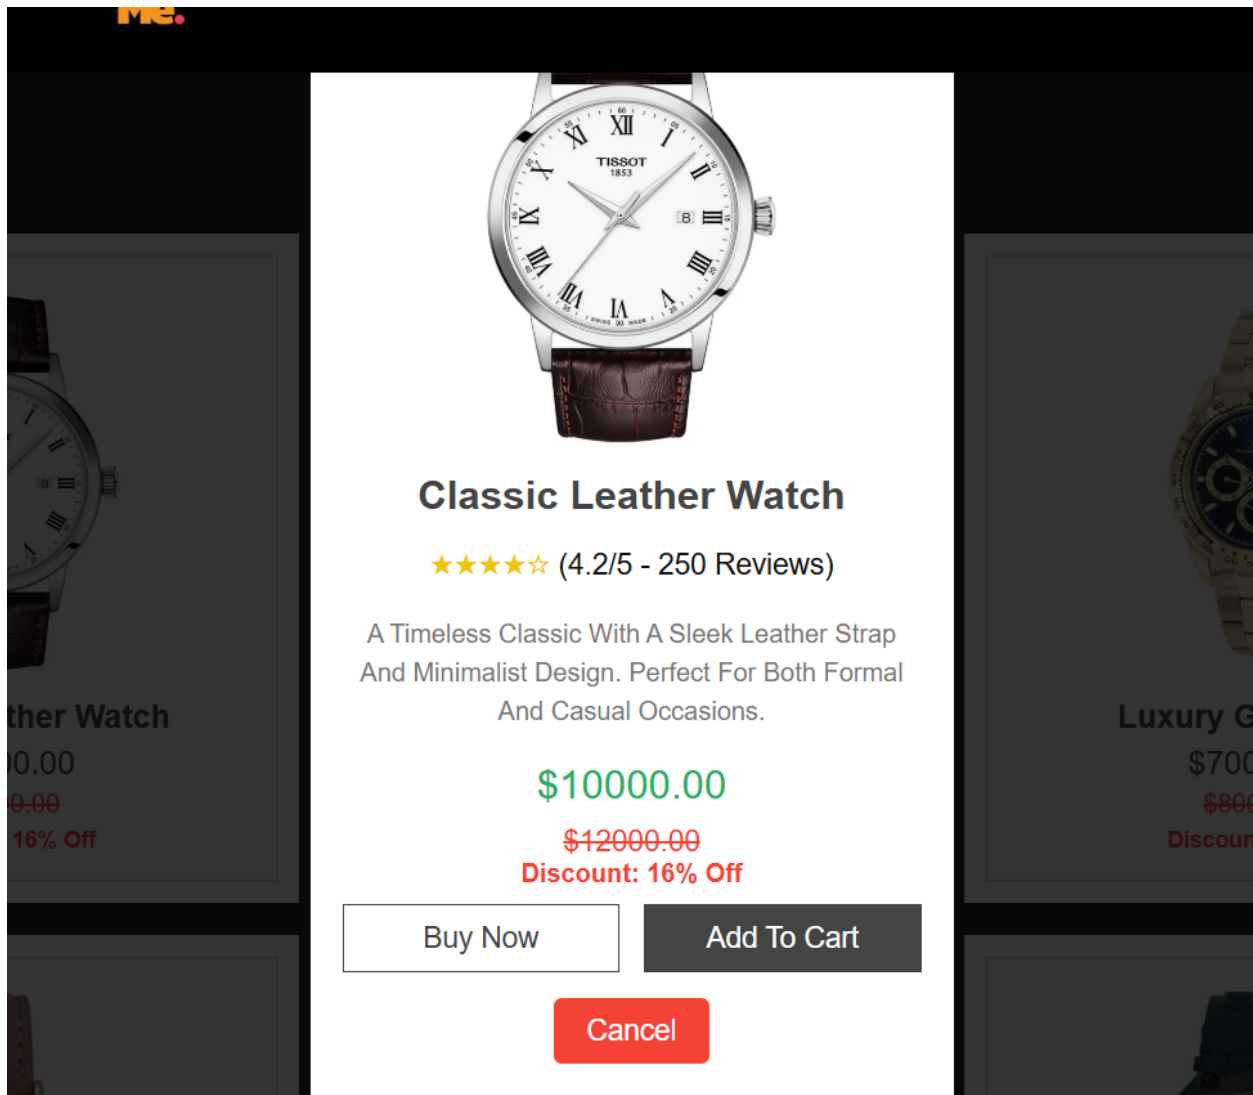

Figure 5 Product page describe

We even have used it for the development of the small description container in the product section and used CSS for overall styling. JavaScript helped us to add cool features to our website and basically it complimented our page. The JS used here is popup/alert commands for the added to cart button and also for the order placing form sections.

3.4 Research Page:

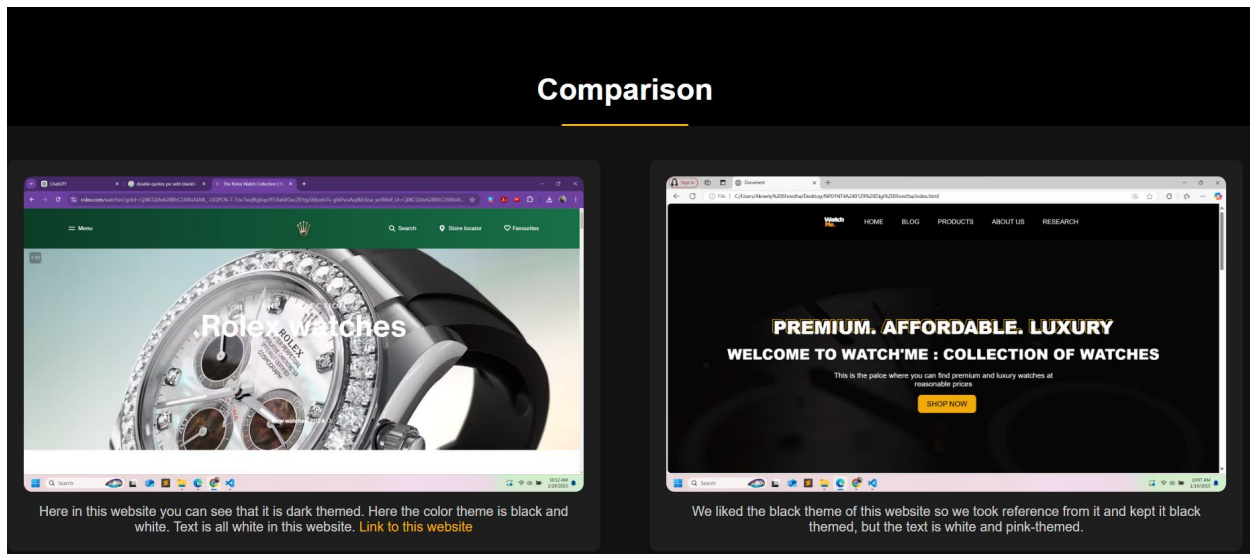

Figure 6 Research page

We had to search many ideas to come up with this website so, in our research section we have used `<link>`, `<a>`, `<img>` etc tags to make other understand what were our inspiration while creating this website. Different another website like: (Rolex, 2000), (Meecha, 2020), and so on. This page describes the side-by-side comparison of our website and other website to compare similarity among us and to make sure their differences among ours and there's. We have also mentioned their website linked for further comparison.

3.5 About Us Page:

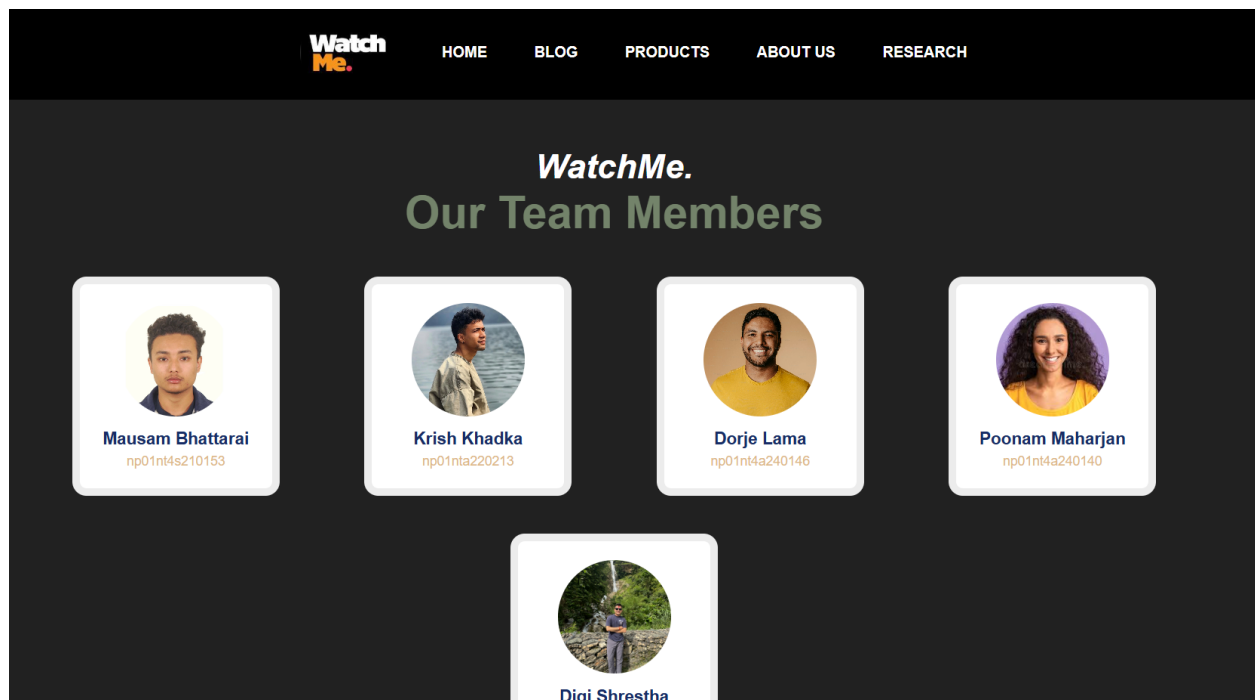

Figure 7 About us page

About us page gives the opportunity to look into our core team and group members.

We have used <form> tag here for customer feedback. (like:)

The image shows a 'Contact Us' form with a dark background. The form has three input fields: 'Your Name', 'Your Email', and 'Your Message'. The 'Your Message' field is a larger text area. Below the input fields is a yellow button labeled 'Send Message'.

Figure 8 feedback form

JavaScript is used in this form for the validation purposes. <link> tag is used to link External CSS in this page too.

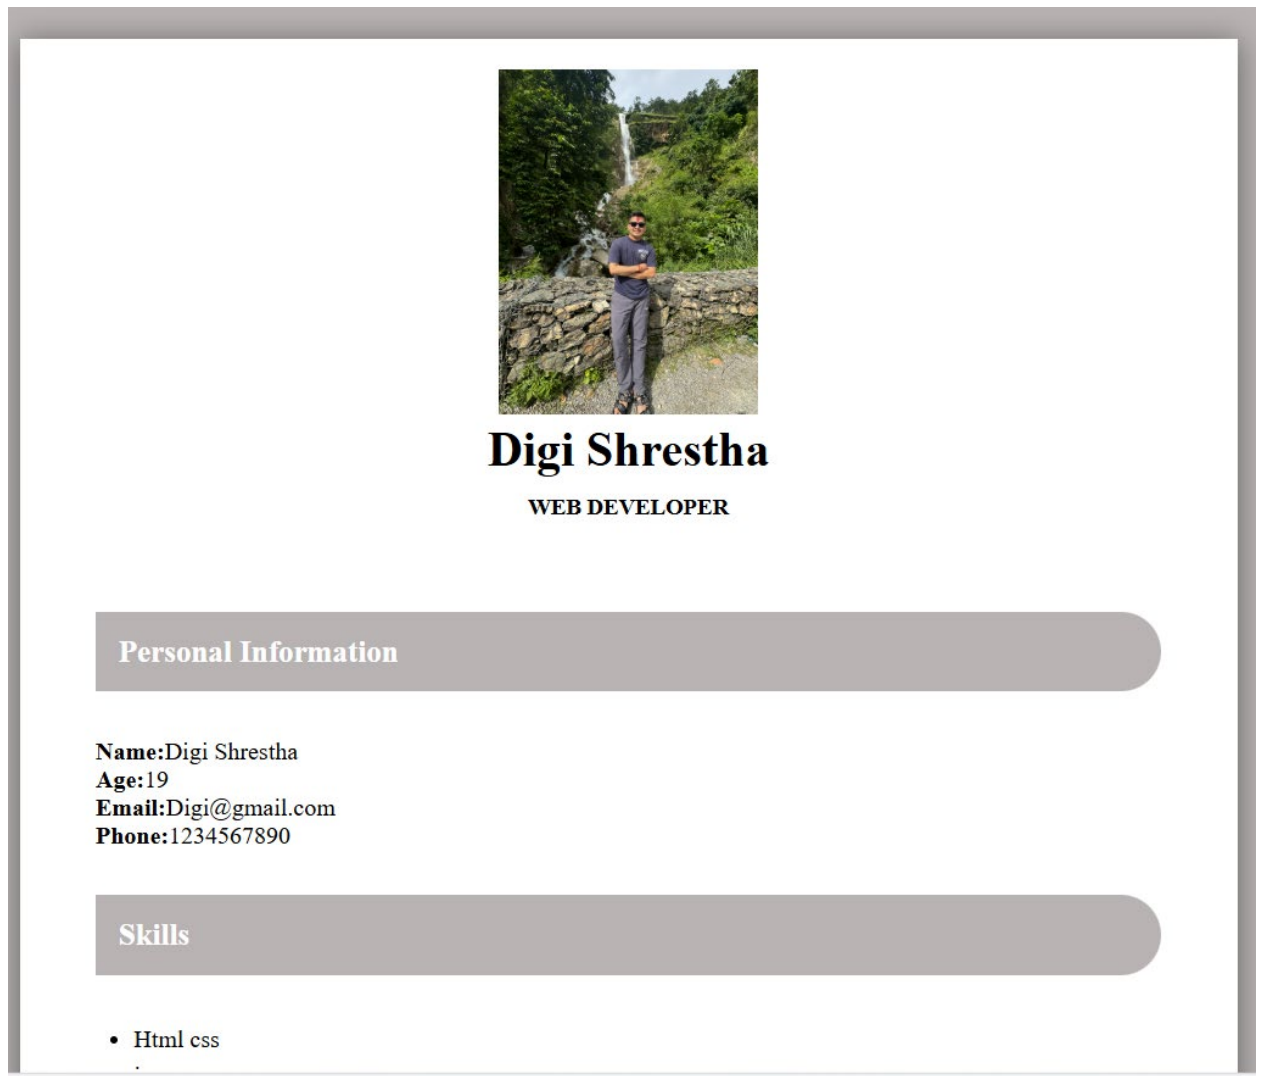

Figure 9 CV of Digi Shrestha

Our about us page give the portfolio of our team members once their profile is click with the help of anchor tag <a>, and href tags, etc. CSS is used to make styling in the group members profiles.

4 Wireframe:

Homepage:

Homepage is one of the main pages for a website, because it is the first page, people come across to and later making their way to blog, product, about us, research..

This is the wire frame of the home page, where there is a video playing in the background and text on top of the video.

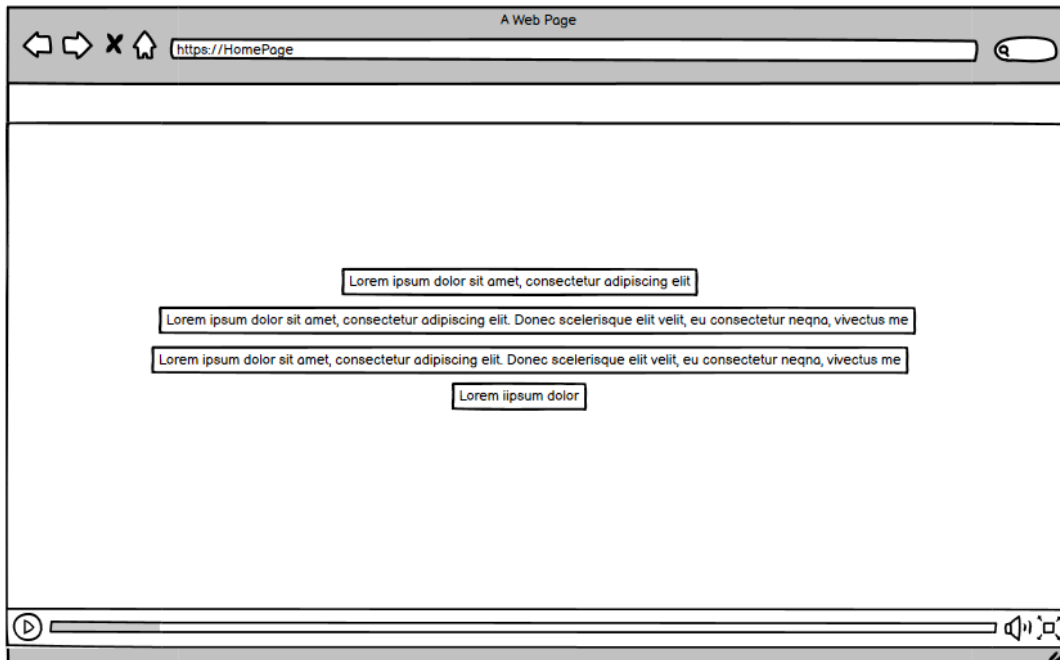

Figure 10 wire frame of home page

This is the web browser version of the home page, where in the header there are the pages linked to it, and in the background of the page there is video running and some

texts about the site on top of it with shop now button written, where it will refer us to the product page directly.

This is the wireframe of home page, but if we scroll down, the text with why choose us comes up, where there are pictures on the each side of the web and there is text written down in the middle.

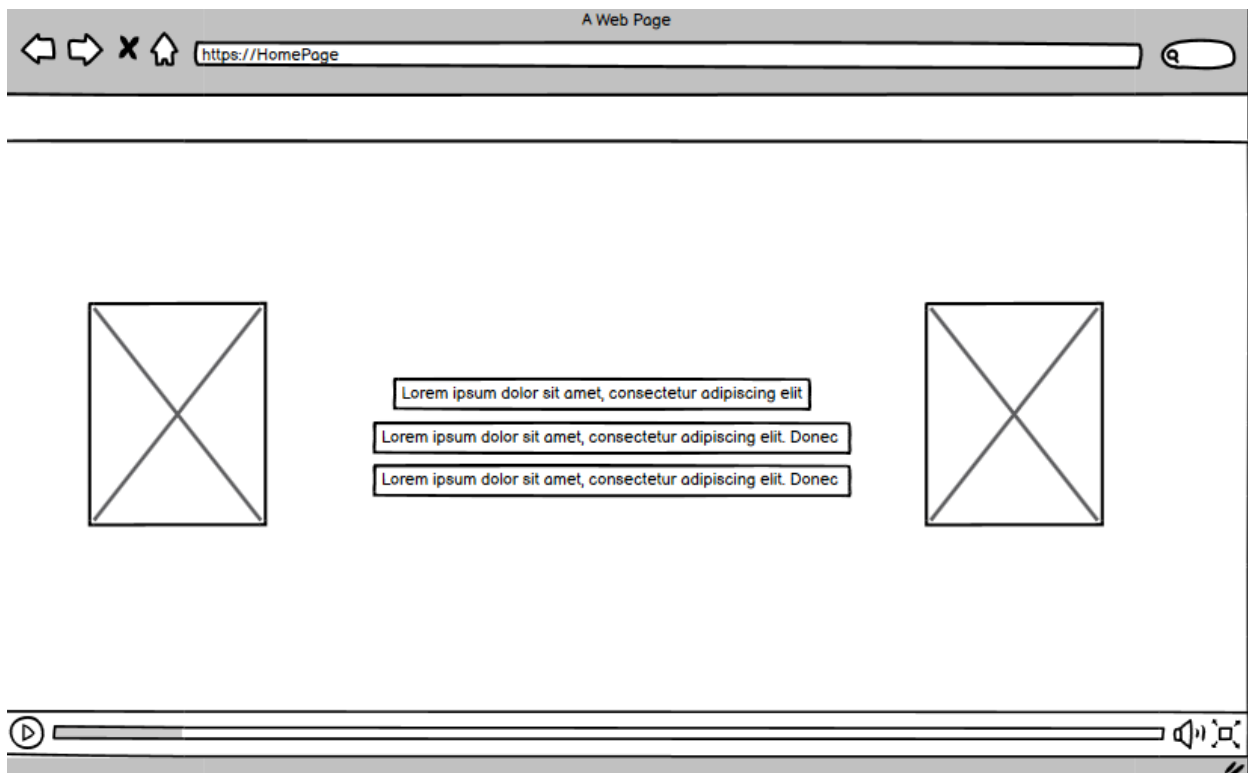

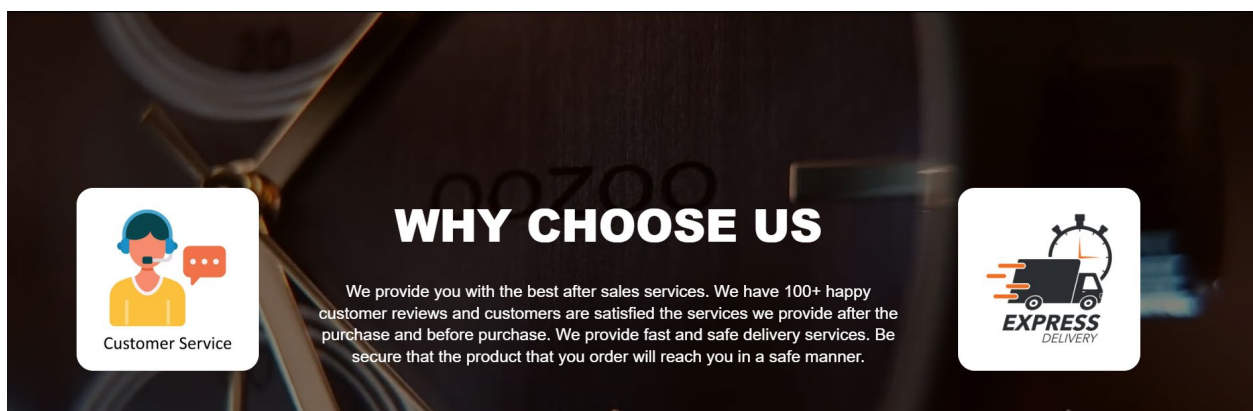

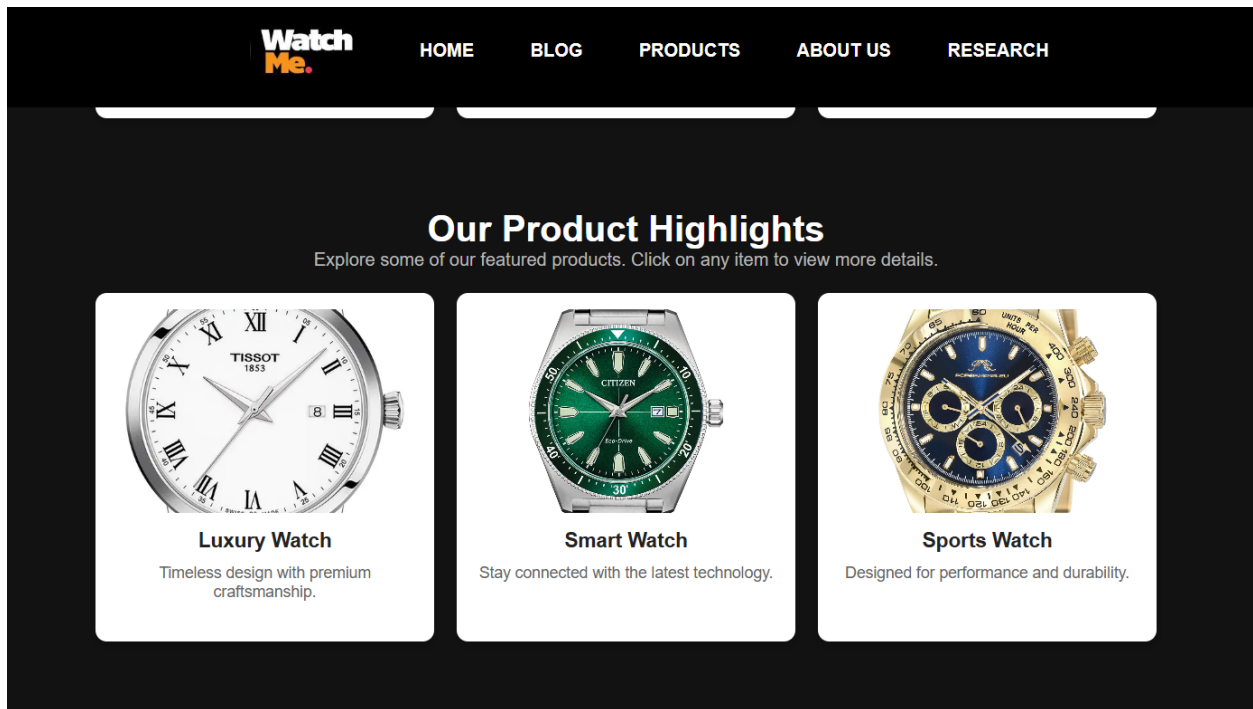

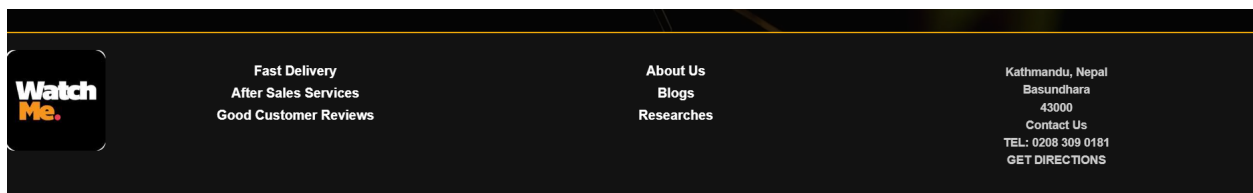

Figure 11 wire frame of home page

If you scroll further more down than you will come across the product page, and just like the product page, if you click on the blog, it will directly link you toward the product page.

Footer is looking like this.

Blog:

Comparison and explanation:

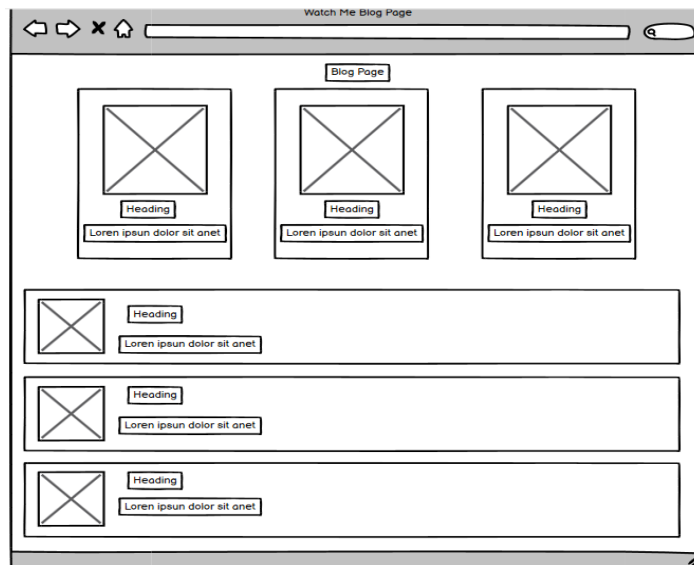

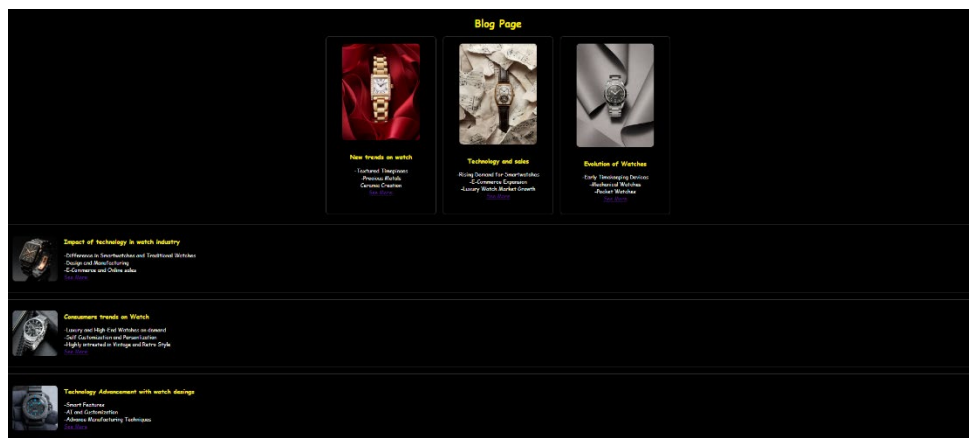

Figure 12 wire frame of blog page

The wireframe helps developer to visualize the outline of the web page. Here if we compare the wireframe of blog page and its original web page, there is text written on the top as Blog page

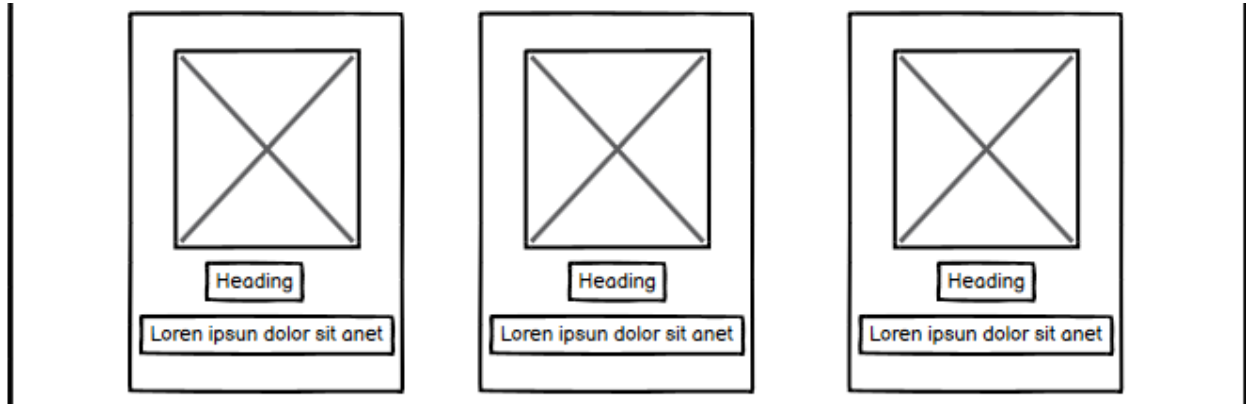

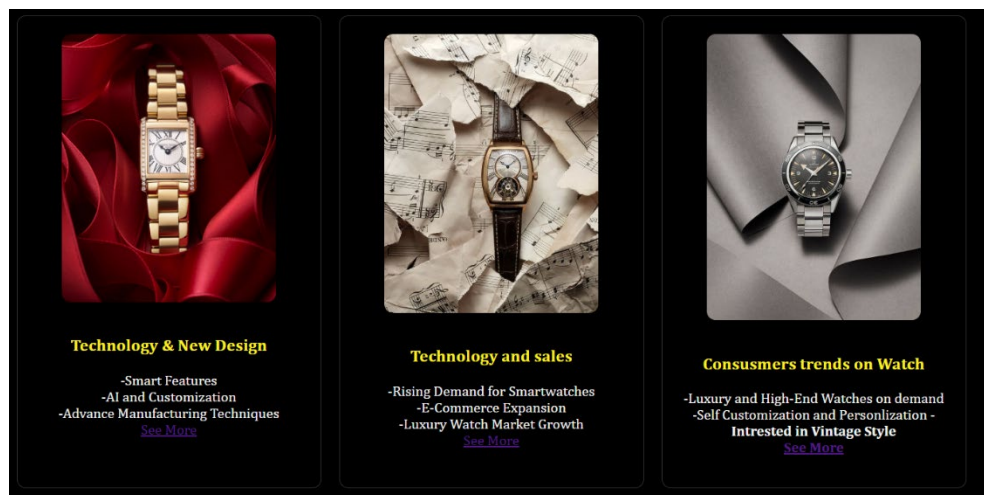

Figure 13 wire frame of blog 2

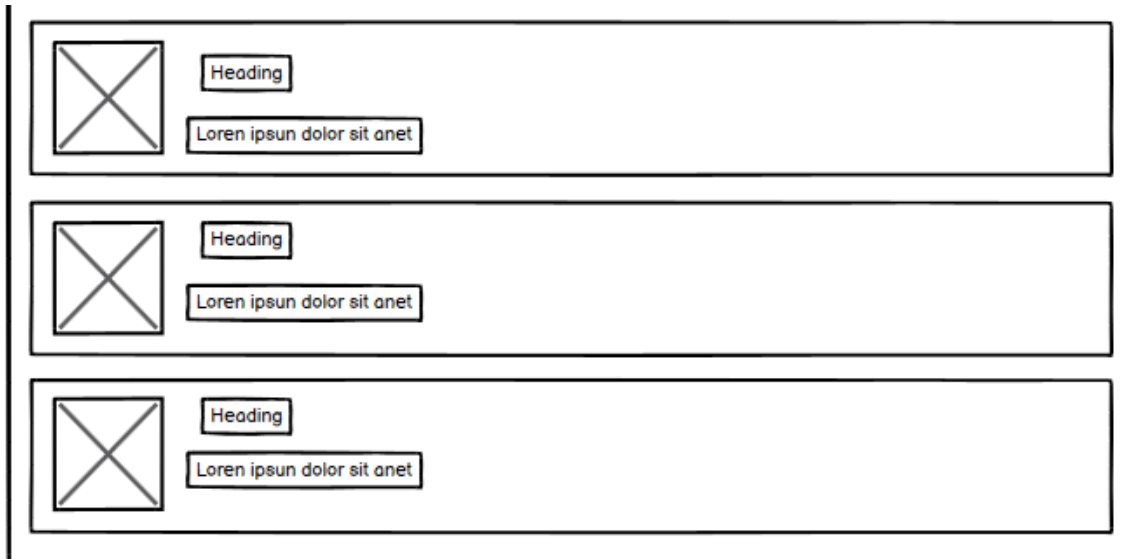

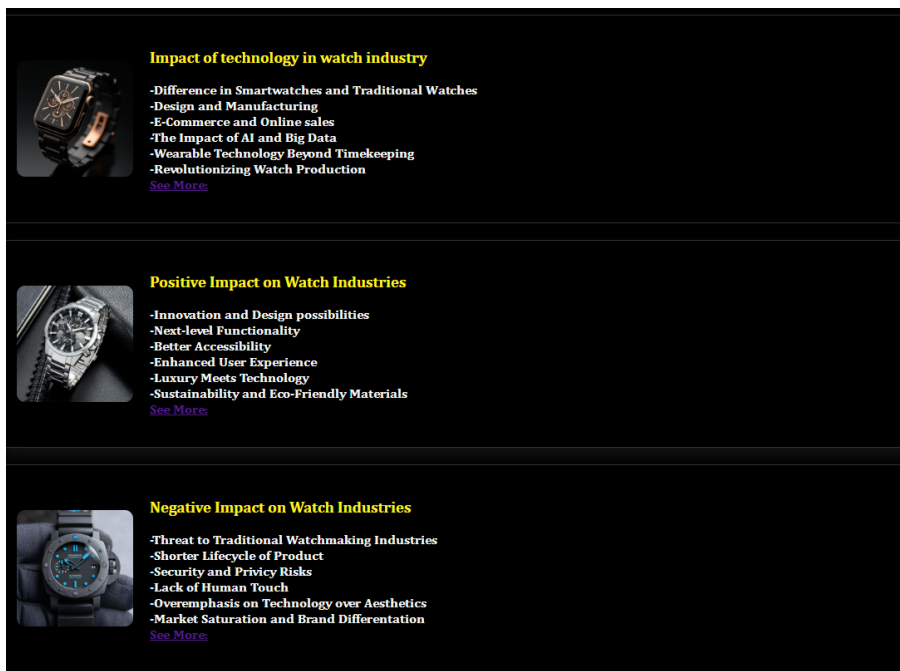

Figure 14 wire frame of blog 3

The wireframe contains no actual content, and the real web page only contains the topics and its description and if you click on see more: it will guide you to the html page linked to view blog description.

Product:

This is the wireframe of the product page, where there are different sized shaped used and there are images with the prices noted down.

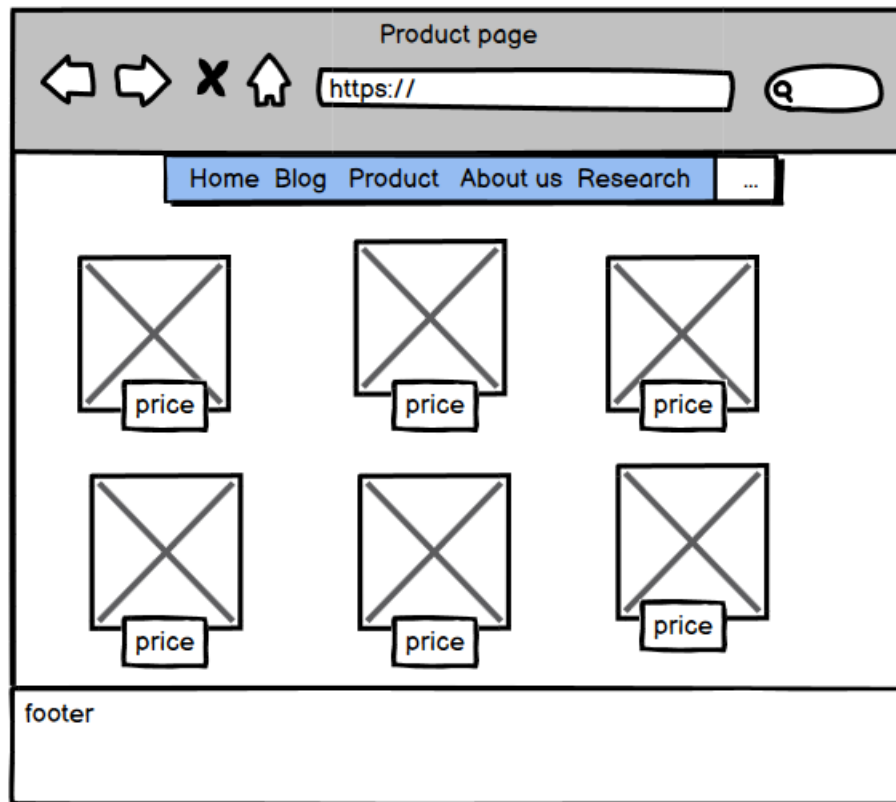

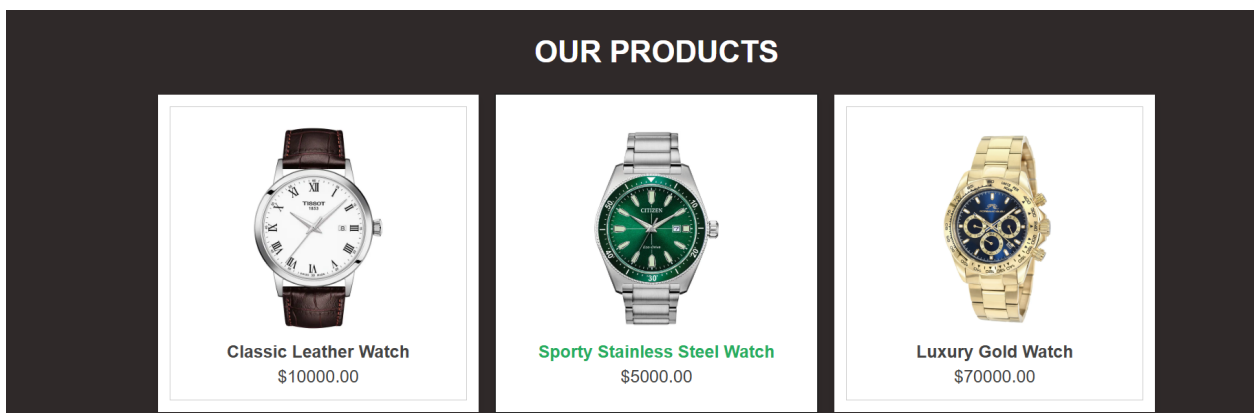

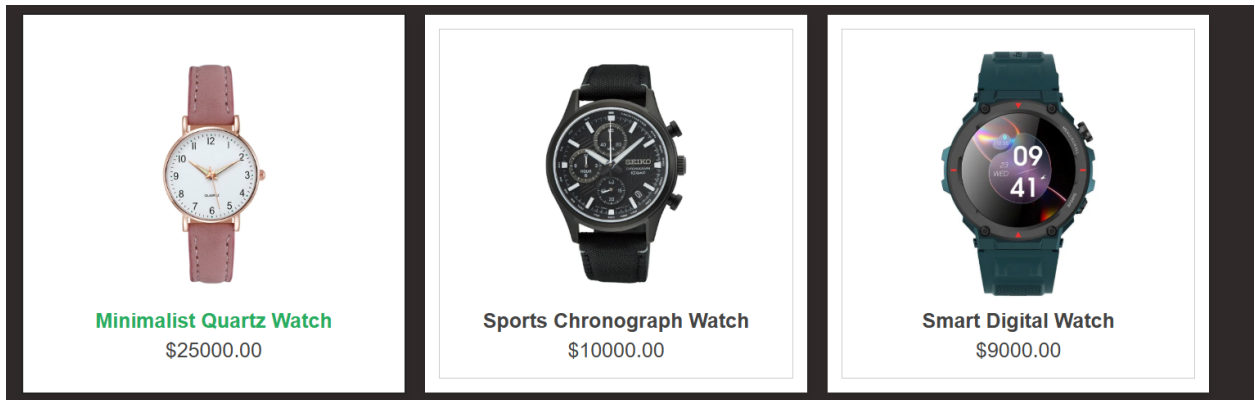

Figure 15 wire frame of product page

This is the product page, while viewing it in browser, where there are different brand used, and their respective prices noted down. We had used horizontal shape, to keep each brand. We also have used Javascript for this page, so that It works, when the consumers purchases the brand.

Research:

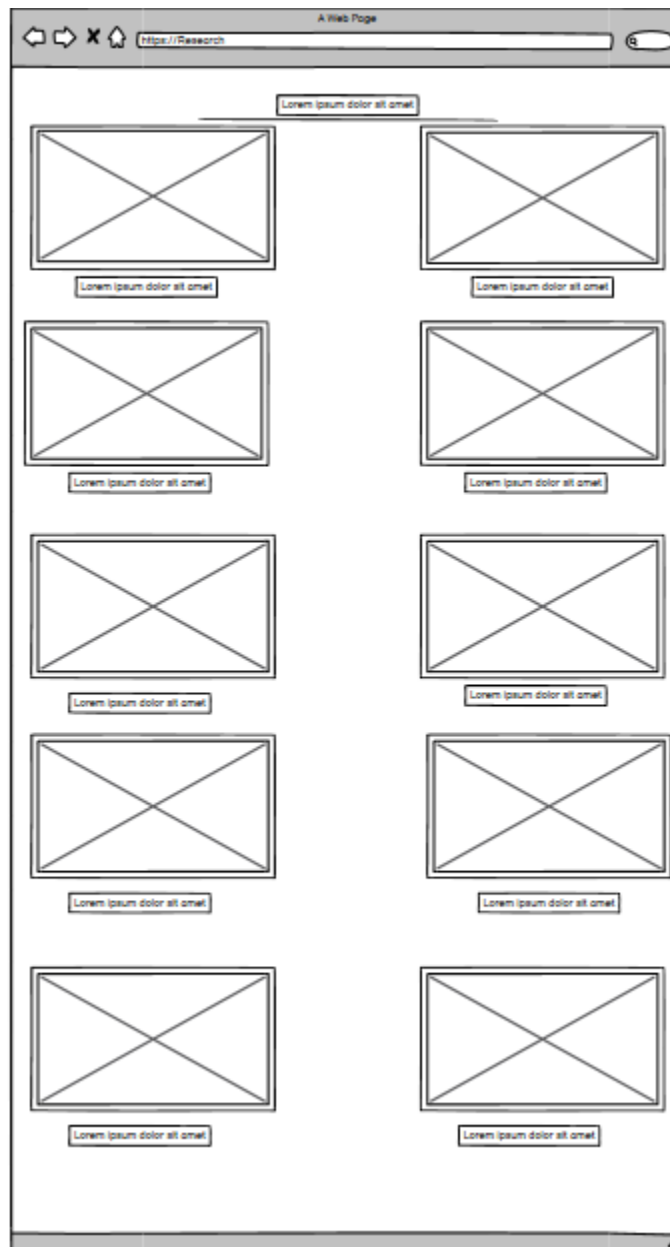

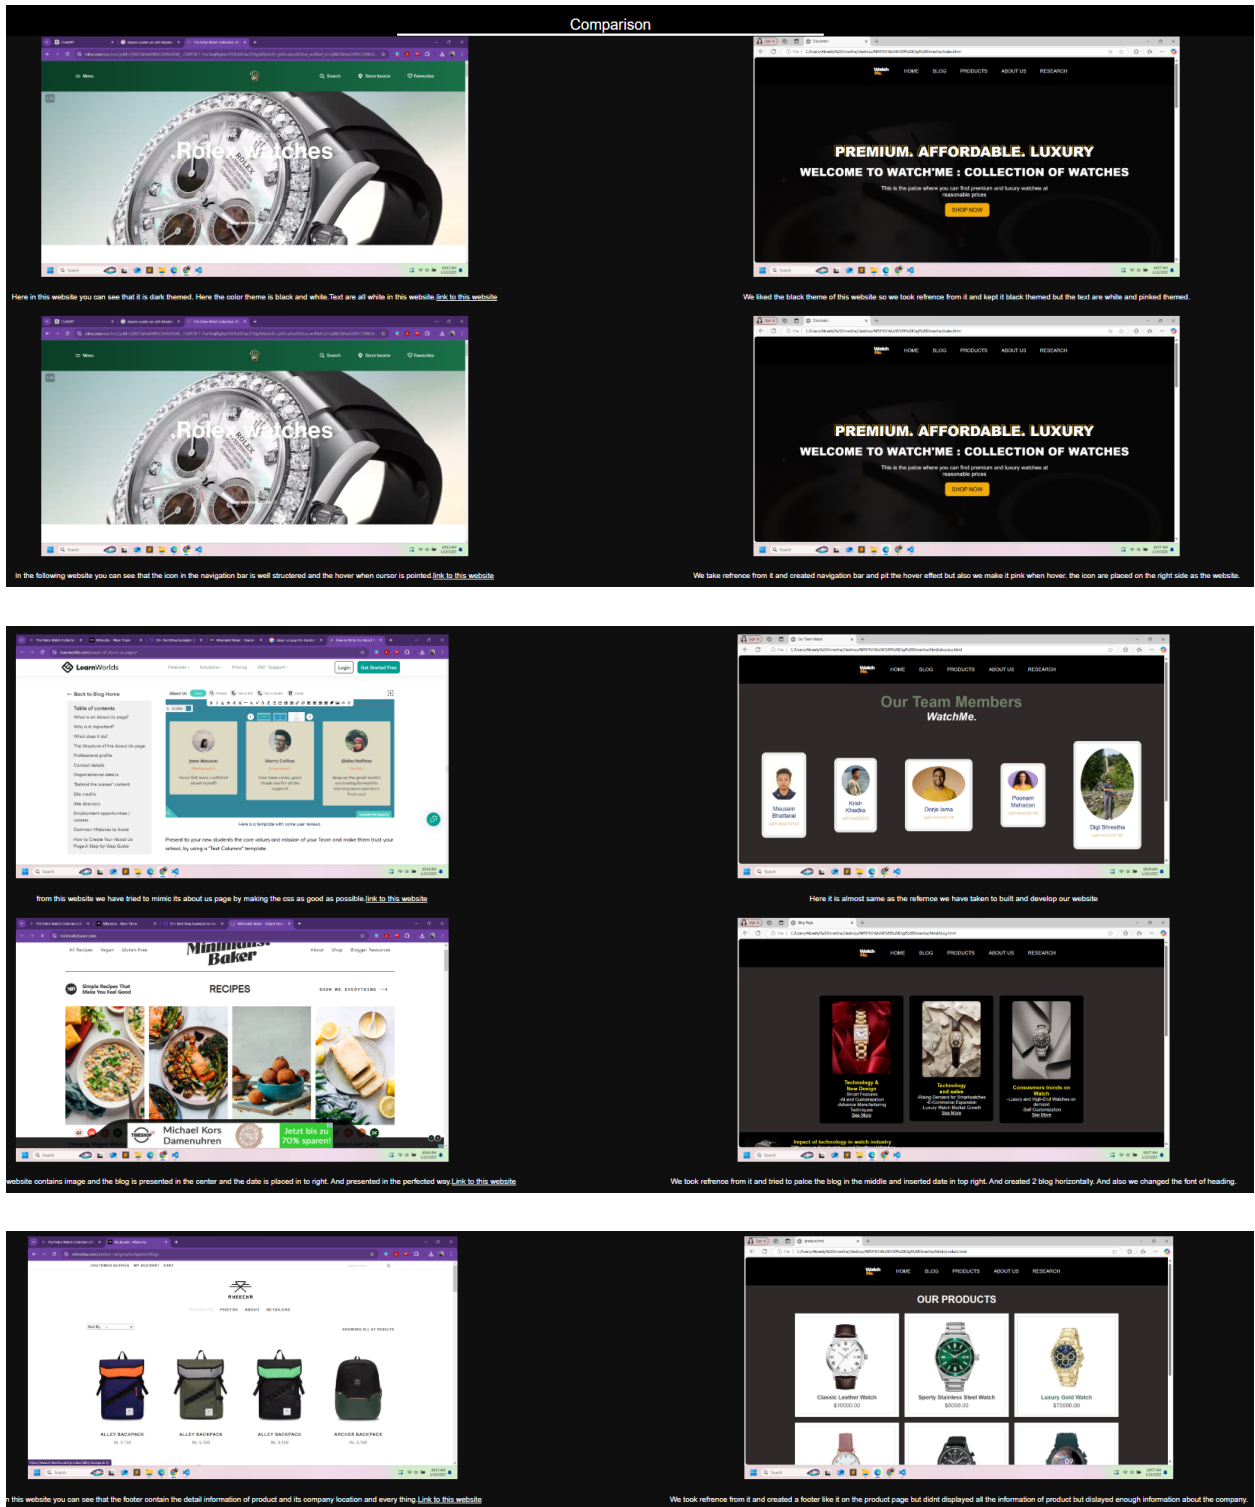

Figure 16 wire frame of research page

The browser page contains the pictures of each pages (Home page, blog page, product pages and more.) to create this research page we used, the images of each page and respectively added text to each page explaining the references we took

from. We created two horizontal box shaped, and kept it in the either side of the page, and spaces between them.

The code for the research page is:

We have used `<div>` tag to create the container to keep the information and also used `<table>` tag and its attributes.

About us:

This is the wireframe of About us page, where there is text in the middle of the web browser and, four different sized shapes used to represent, each members, that are in the team.

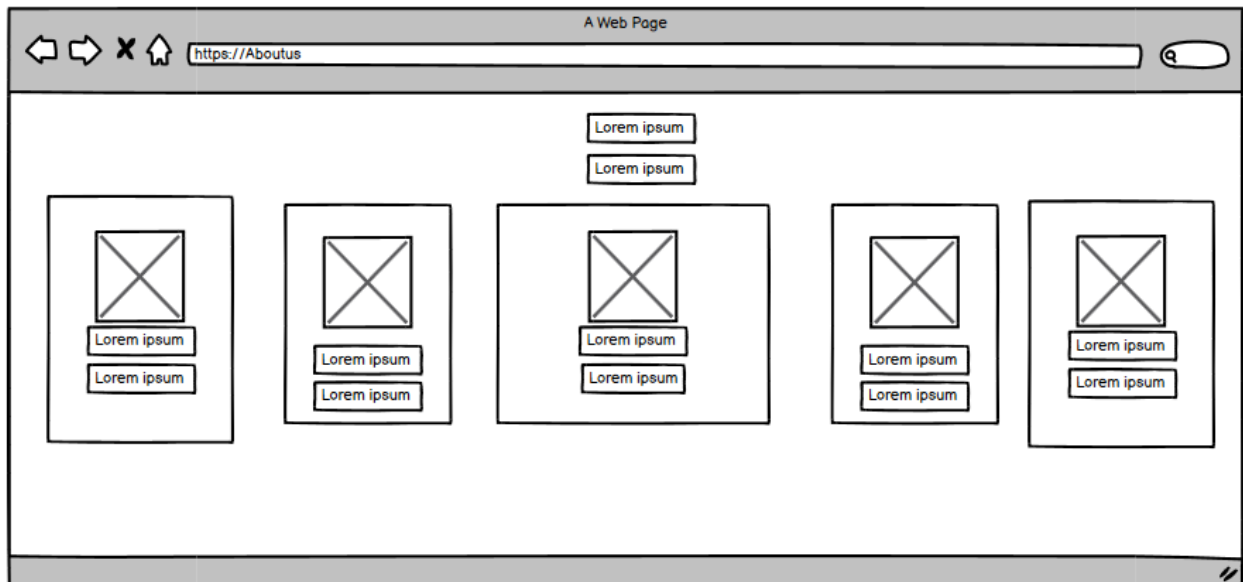

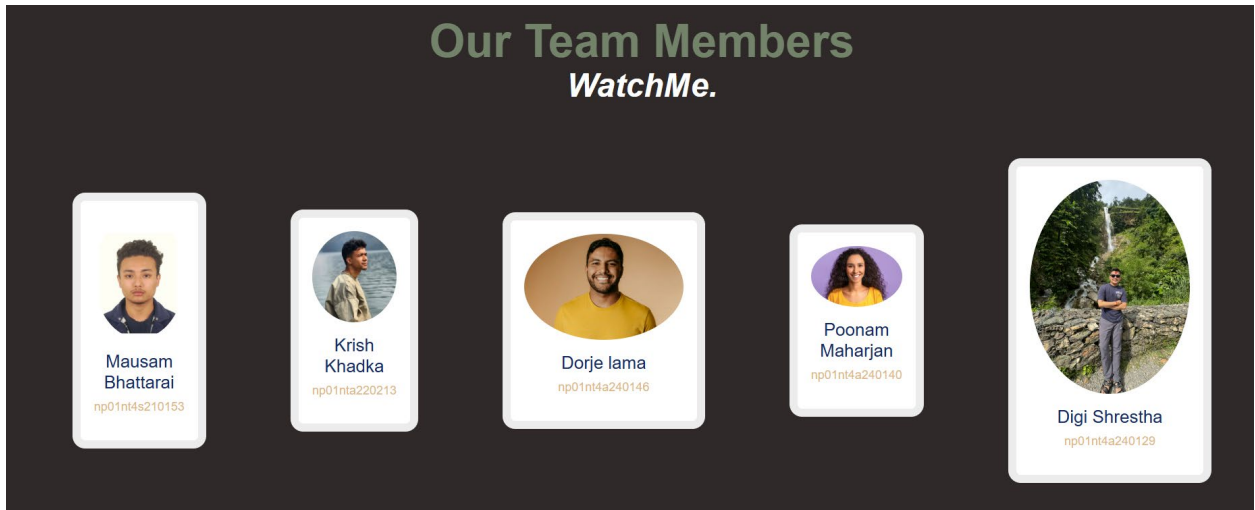

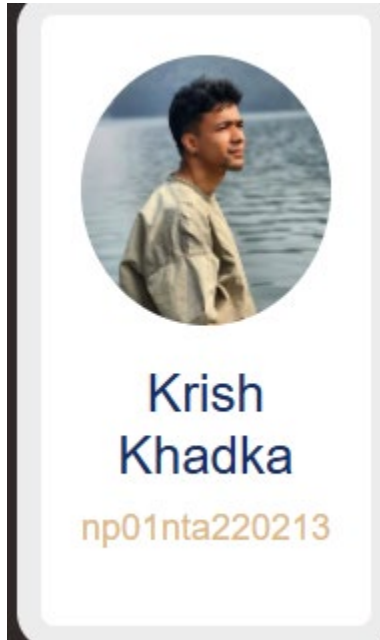

Figure 17 wire frame of about us page

if we view it in the browser, it would look something like this:

This is what it looks like when viewing in the browser, we have used different shapes to identify each member of the group and we also have used the text below the picture to represent each member of the group, with our respective college id's.

When clicked to each member page in web browser we are taken to each individual member portfolio, let's see.

This is the portfolio of one of the members in this team, if we click on the box, we are referred to his portfolio.

5 Testing:

To test the hover effect is working in the navigation bar

Figure 18 test 1.1

Figure 19 test1.2

Table 1 Hover Effect test

Objective	To test the hover effect on navigation bar in home page
Action	Mouse curser was point in the button of navigation bar
Expected result	Colour change and slight bump upward
Actual result	Colour changed to orange with slight bump upwards
Conclusion	Test was successful

To check the added to cart alert when clicked on the button.

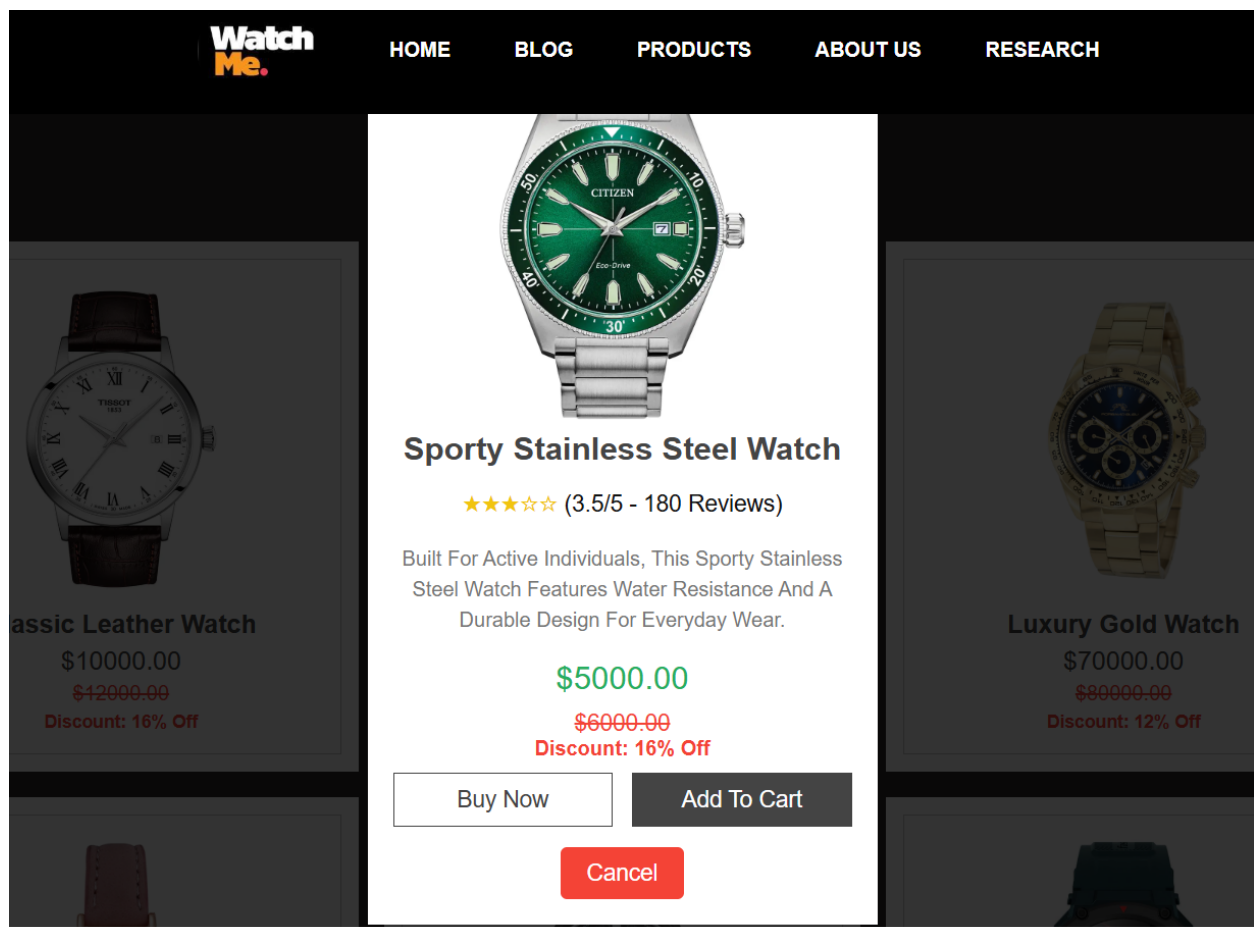

Figure 20 test 2.1

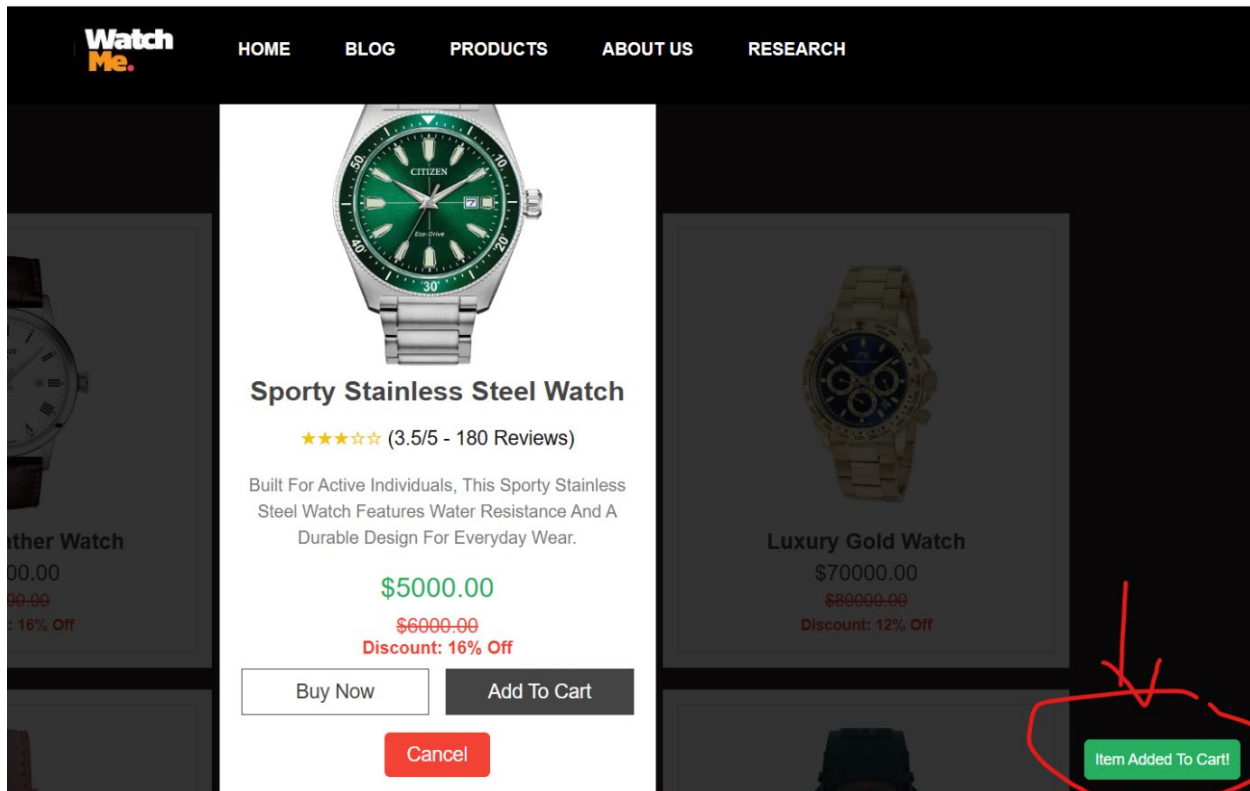

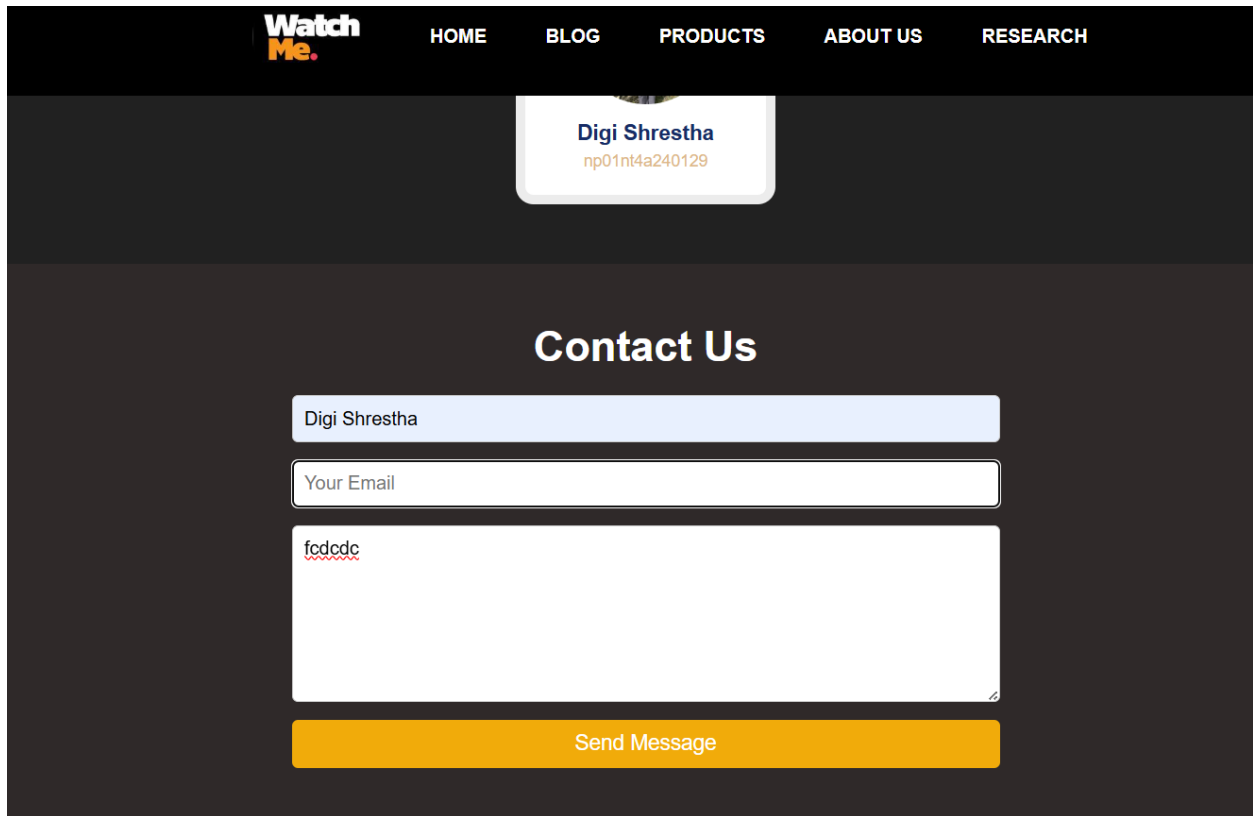

Figure 21 test 2.2

Table 2 Added to cart alert

Objective	To check the added to cart alert when clicked on the button
Action	Added to cart is clicked on product page
Expected result	Added to cart alert
Actual result	Cart Added alert seen
Conclusion	Test was successful

To test the validation of the form

The screenshot shows a web page with a dark header. The header contains the 'Watch Me.' logo on the left and navigation links 'HOME', 'BLOG', 'PRODUCTS', 'ABOUT US', and 'RESEARCH' on the right. Below the header, there is a dark grey banner with a white box containing the text 'Digi Shrestha' and a small orange code 'np01nt4a240129'. The main content area is dark grey and features the title 'Contact Us' in white. Below the title, there is a form with three input fields: a text field with 'Digi Shrestha', an email field with 'Your Email', and a large text area with 'fcdcdc' and a red squiggly line. At the bottom of the form is a yellow 'Send Message' button.

Conclusion	Test was successful

6 Conclusion.

As we summarize the first coursework of our group work, the process of creating an e-commerce website using HTML and CSS, we gained valuable experience in collaborating in team. This project has helped us understand what it like to work as a team, balancing tasks, integrating ideas, and showing every group member creativity. We developed skills in creating a well-structured website, ensuring with complemented designs for each page, done by everyone of the team.

Throughout the development process, there were several challenges, we faced such as selecting the right background colours, styling text, linking pages and keeping a video as the background as the home page. Tackling these challenges, it required both individual efforts and group discussions, which improved our problem-solving skill and added strength to our teamwork.

In conclusion, we also realized that some difficulties could have been avoided if we had discussed it beforehand like choosing colours for our website, and text styles. Despite these obstacles, we progressed nevertheless and learned lesson. This milestone has set a solid foundation for the subsequent phases of the project.
